OKA AND F. J. SIMPSON. Quercetinase, A Dioxygenase Containing Copper	1
W. URRY, J. R. KRIVAGIC, AND J. HAIDER. Calcium Ion Effects a Notable Change in Elastin Conformation by Interacting at Neutral Sites	6
USZ CZAPSKI AND ROMAN ANTOSZEWSKI. Peroxidase Biosynthesis in Pea Roots as Influenced by IAA Treatment	12
W. STEGGLES, T. C. SPELSBERG, AND B. W. O'MALLEY. Tissue Specific Binding <i>in Vitro</i> of Progesterone-Receptor to the Chromatins of Chick Tissues	20
A. BLONDIN, A. F. DECASTRO, AND A. E. SENIOR. The Isolation and Properties of a Peptide Ionophore from Beef Heart Mitochondria	28
YOSHIDA, T. OSHIMA, AND K. IMAHORI. The Thermostable Allosteric Enzyme: Phosphofructokinase from an Extreme Thermophile	36
ABELLE COUNIL AND MARTINE ARRIO-DUPONT. The Thiol Groups of Aspartate Aminotransferase Reactions of Specific Reagents with Aldimine and Aminic Forms of Enzyme	40
ERGE DAVID AND CLAUDINE ROUZEAU. Ribonucleoside Diphosphate Reductase from <i>Escherichia coli</i> : A New Approach to the Problem of Stereospecificity	46
P. BRIERLEY, M. JURKOWITZ, K. M. SCOTT, K. M. HWANG, AND A. J. MEROLA. Activation of Energy-Linked K ⁺ Accumulation in Isolated Heart Mitochondria by Non-Ionic Detergents ...	50
AZHAR AND C. R. KRISHNA MURTI. Effect of Indole-3-Acetic Acid on the Synthesis of Cycle 3'-5' Adenosine Phosphate by Bengal Gram Seeds	58
PERAHIA AND B. PULLMAN. The Conformational Energy Map for the Disulphide Bridge in Proteins	65
T. HSIEH, L. E. GUNDERSEN, AND CARL S. VESTLING. Determination of the C-Terminal Status of Rat Liver Lactate Dehydrogenase by an Improved Selective Tritiation Method	69
OBERT R. KLEVECZ. Rapid Protein Catabolism in Mammalian Cells is Obscured by Reutilization of Amino Acids	76
P. GROTH AND L. G. YOUNG. On the Formation of an Intermediate in the Adenine Phosphoryltransferase Reaction	82
C. HSIA, P. T. S. WONG, AND DAVID H. MACLENNAN. Salt-Dependent Conformational Changes in the Cell Membrane of <i>Halobacterium salinarium</i>	88
BONSIGNORE, R. CANCEDDA, I. LORENZONI, M. E. COSULICH, AND A. DE FLORA. Human Erythrocyte Glucose 6-Phosphate Dehydrogenase. Physical Properties	94
EDERICK S. SKELTON, CHRISTINE M. BOWMAN, THOMAS H. PORTER, AND K. FOLKERS. New Quinolinequinone Inhibitors of Mitochondrial Reductase Systems and Reversal by Coenzyme Q	102
ERALD S. LEVEY. Restoration of Glucagon Responsiveness of Solubilized Myocardial Adenyl Cyclase by Phosphatidylserine	108
T. MADDAIAH, S. Y. CHEN, I. REZVANI, R. SHARMA, AND P. J. COLLIPP. Inactivation of Microsomal Glucose-6-Phosphatase by Pyridoxal-5'-Phosphate	114
ESTER I. HARRISON AND HALVOR N. CHRISTENSEN. Evidence for a Hepatic Transport System not Responsive to Glucagon or Theophylline	119
OBERTO MARCO, JUAN CARBONELL, AND PILAR LLORENTE. Allosteric Properties of Adipose Tissue Pyruvate Kinase	126
ASAKO YOSHIKAWA-FUKADA AND J. D. EBERT. DNA Synthesis by an Insoluble Chromatin Fraction Associated with the Nuclear Membrane of Animal Cells	133
REGORY C. Y. LEE AND SUNNEY I. CHAN. A ³¹ P NMR Study of the Association of Uridine-3'-Monophosphate to Ribonuclease A	142
YCE TAYLOR-PAPAIMITRIOU, D. SPANDIDOS, AND J. G. GEORGATSOS. An Endonuclease Activity Associated with Preparations of Chick Interferon	149
OHMORI, H. ISHITANI, K. SATO, S. SHIMIZU, AND S. FUKUI. Vitamin B ₁₂ Dependent Glutamate Mutase Activity in Photosynthetic Bacteria	156
HIGERU IIDA AND HIKOYA HAYATSU. Chemical Transformation of 4-Thiouridine with Nitrous Acid..	163
D. RAACKE. Stereochemistry of the Puromycin Reaction	168
ORDECHAI ABOUD AND MIKULAS BURGER. Cyclic 3';5' Adenosine Monophosphate-Phosphodiesterase and the Release of Catabolite Repression of β -Galactosidase by Exogenous Cyclic 3';5' Adenosine Monophosphate in <i>Escherichia coli</i>	174

Information for Contributors

Manuscripts in duplicate may be sent to any one of the editors whose names and addresses are listed on the inside front cover.

In order to assure rapid and accurate publication, it is essential that manuscripts be prepared according to the instructions given below. Manuscripts which do not conform to these specifications may have to be returned for retyping.

Preparation of Manuscripts

Article length should not exceed 5 typewritten pages, double-spaced on 8½ x 11" high quality paper (the complete manuscript, including space occupied by figures and tables, should be not more than 8 pages long).

Summary: The article must be preceded by a brief summary, typed single-spaced, not to exceed 10 lines in length (approximately 100-150 words). This paragraph should adequately summarize the pertinent findings of the paper.

Typing. Since articles are reproduced directly from manuscripts, the latter must be typewritten on good quality white bond paper. A black silk or carbon typewriter ribbon should be used, and special care should be taken to insure a sharp, clean impression of letters throughout. Use of an electric typewriter is strongly recommended. Erasures should be avoided. Care must also be taken to avoid errors in spelling, word division, and punctuation.

Manuscripts should be double-spaced, on only one side of the sheet; **references, footnotes, and figure legends should be single-spaced.** Typing area of the page must be as close as possible to 6½" wide by 9½" long.

Use of Symbols and Abbreviations. Abbreviations except for those in the Commission on Biochemical Nomenclature Document #1 (*Arch. Biochem. Biophys.* **115**, 1-12 (1966)) must be defined, and ambiguous abbreviations such as TCA, or P to signify anything but phosphate, should be avoided. Authors are urged to use chemical formulas, such as CCl₃COOH, wherever possible. If improper abbreviations are used it may be necessary to return manuscripts for retyping, which will delay their publication.

Footnotes should be typed single-spaced, at the foot of the page on which they are mentioned in the text. References and figure legends should be typed single-spaced on separate pages.

Illustrations and Tables. Photographs are acceptable. Mathematical or chemical symbols that cannot be typed should be inked in carefully in black. Structural formulas should be drawn in black ink. Illustrations and tables should be submitted on separate sheets. **Do not attempt to insert the figures, figure legends, or tables into the text.** This will be done by the Publishers.

All drawings should be done in black ink on white paper or tracing cloth; they must be planned for reduction to a width of not more than 5". Final size of the printed page is 5½ x 8¾"; figures must be planned to fit these proportions.

Graph paper, if used, should be ruled in blue; grid lines that are to show in the final reproduction should be inked in black. High quality glossy prints are acceptable.

Page Numbers and Headings. Page numbers should be typed at the top of the page.

The title of the paper should be typed in capital letters near the top of the first page, with the name(s) and affiliation(s) of the author(s) typed just below. Headings within the article should be arranged according to their relative importance.

References to the literature may be cited by number and listed in numerical order in a single-spaced list placed at the end of the manuscript. Abbreviations of journal titles should be those used in *Chemical Abstracts*.

Mailing. To avoid creasing, please place manuscripts between cardboards when mailing.

Reprints

Reprint order forms are sent to the authors immediately upon acceptance of their manuscripts. The price list is included.
